Paging Reinvented

Made in France, Made for the Future

London,

October 29th – 31st

David VILLACASTIN – TPL Systèmes

What new's in TPL Systèmes

- Integration of a Plastic Injection Molding Unit
 - First injection planned for late 2025
 - Purchase of a new building next to TPL Systèmes headquarters. 1,000 m² dedicated to the new production unit.
 - Equipment:
 - 1 tri-material injection press (120 tons) with 3-axis robot
 - 1 bi-material injection press (220 tons) with 3-axis robot
 - Color dosing units, dryers, and mold temperature control systems
 - 1 ultrasonic welding machine
 - 1 hot insert placement machine
 - 1 CNC machining center

What new's in TPL Systèmes – Lasted Projects

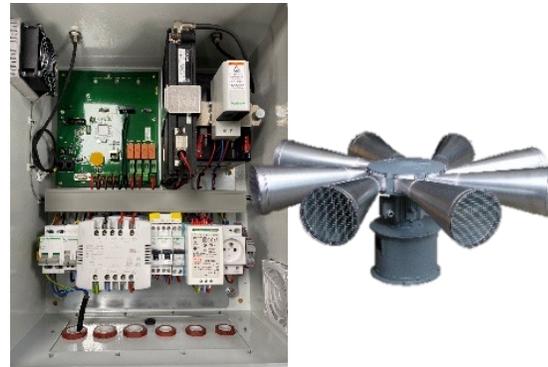

MDR

Delivery of MDR units for Police market.
That's more than 40,000 units delivered in just 2 years

PocBOX V2

Delivery of 1,264 Pocsag transmitters across
French Fire Stations since late 2023.

Siren Controller – SAIP, US, and Australia

More than 3,000 systems delivered.

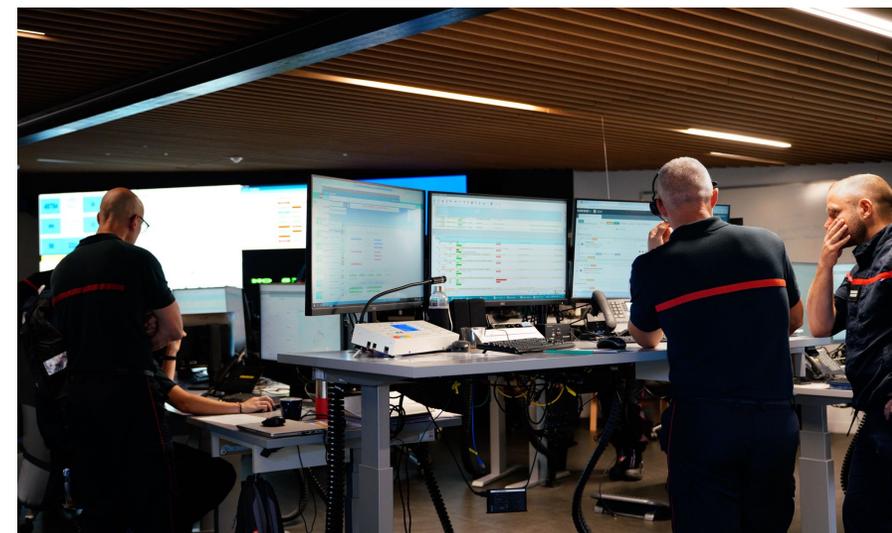

BBM for French Police Motorcycles

Development of a communication interface for Police motorcycles.
2025 Orders: 3,200 BBM units.

New control system made by the French MoI

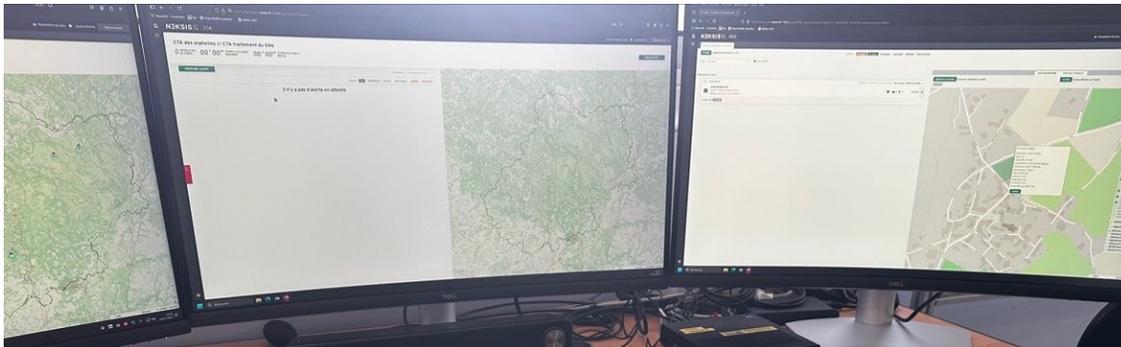

NexSIS 
SI des Secours de nouvelle génération

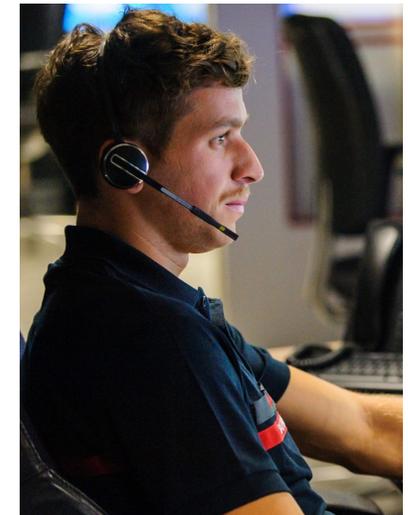

NexSIS: New control system made by the French MoI

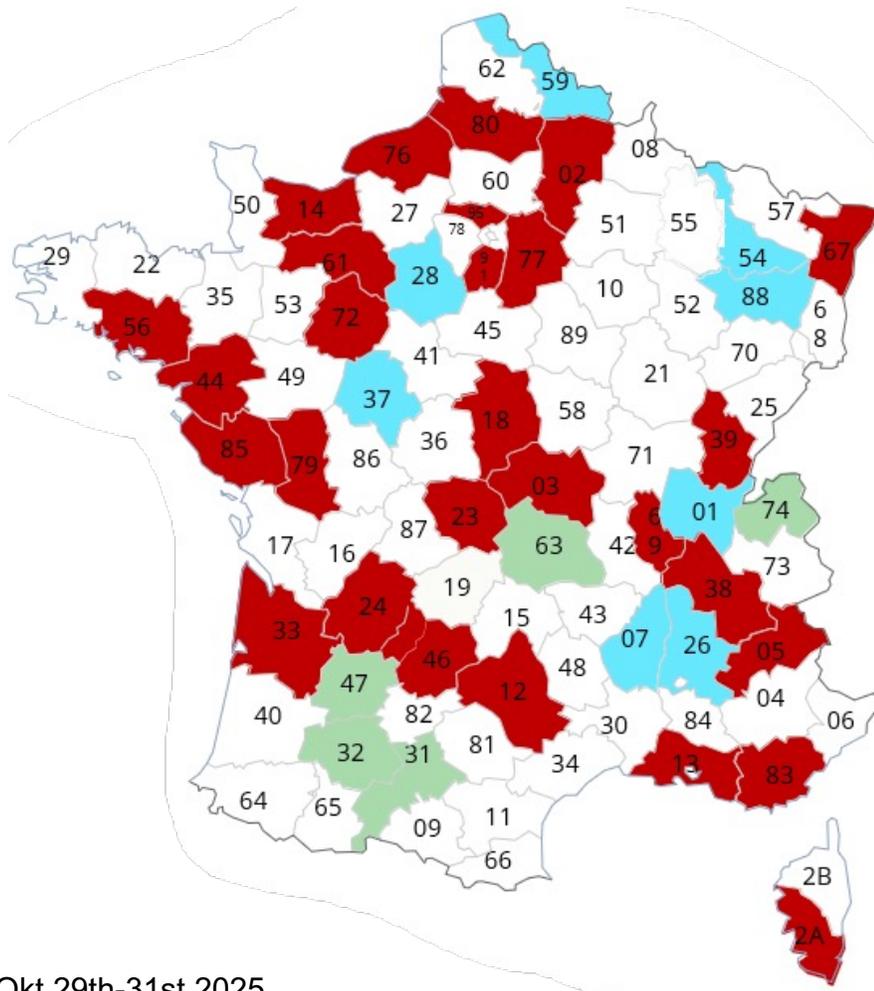

- In 2019, the French Ministry of the Interior decided to develop its CAD System for fire and rescue services.
- To lead this project, the Ministry created a dedicated agency called “ANSC”, in charge of developing and implementing the NexSIS 18-112 system.
- The four CAD solutions currently in service will be replaced by the NexSIS 18-112 software.

NexSIS 
SI des Secours de nouvelle génération

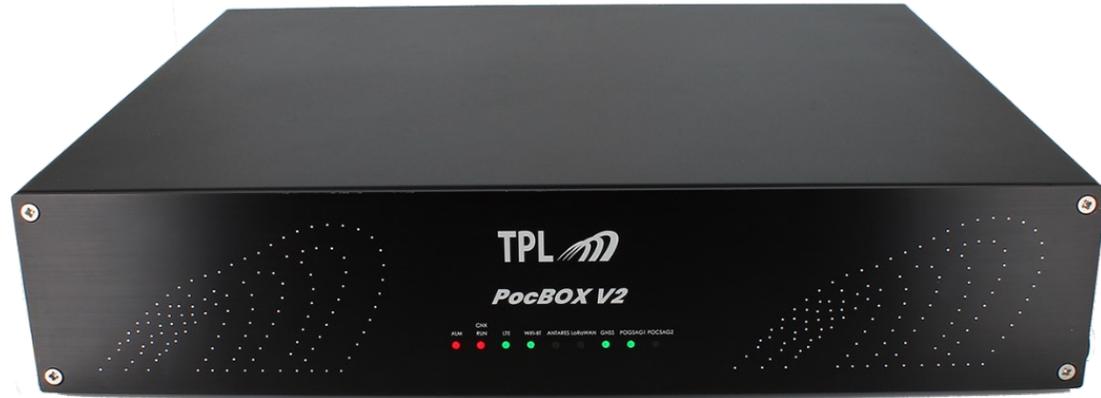

NexSIS: New control system made by the French Mol

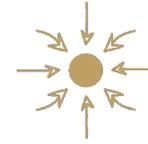

- Most departments plan to upgrade their POCSAG alerting systems when switching to NexSIS 18-112 CAD.
- TPL Systèmes has already deployed more than 1,300 PocBOX units, which are radio our new paging transmitters.
- The deployment of NexSIS across the departments will continue until 2029.

PocBOX V2 – New paging system

Custom-made

PocBOX V2 was specifically developed for NexSIS 18-112.

Flexible

PocBOX V2 meets all the requirements of the various SDIS departments.

Innovative

PocBOX V2 integrates the latest communication technologies.

Reliable

PocBOX V2 ensures consistent triggering at all times.

Scalable

PocBOX V2 is designed to evolve over time thanks to its optional extension boards.

Redundant

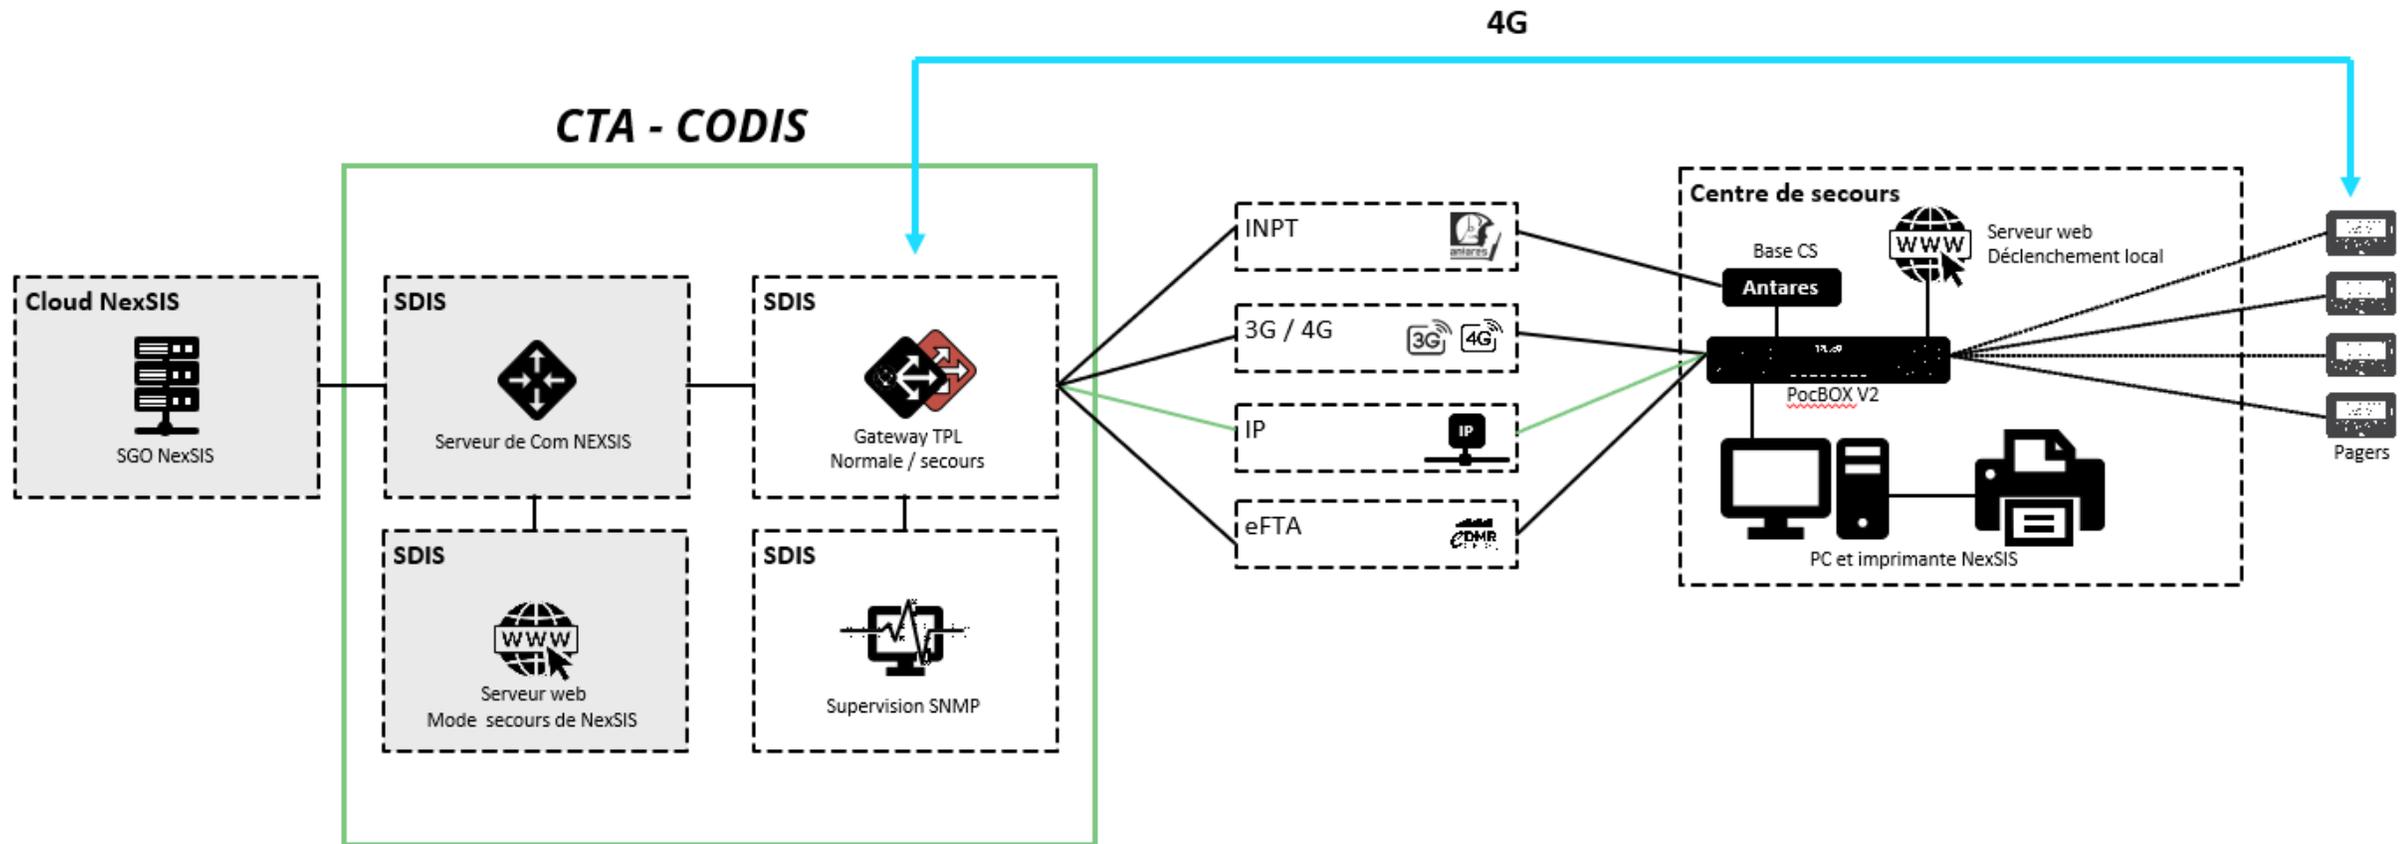

PocBOX V2 includes five triggering methods: Local web / VPN IP / 4G LTE / eFTA / TAA

Made in France

PocBOX V2 is 100% developed, manufactured, and assembled in France

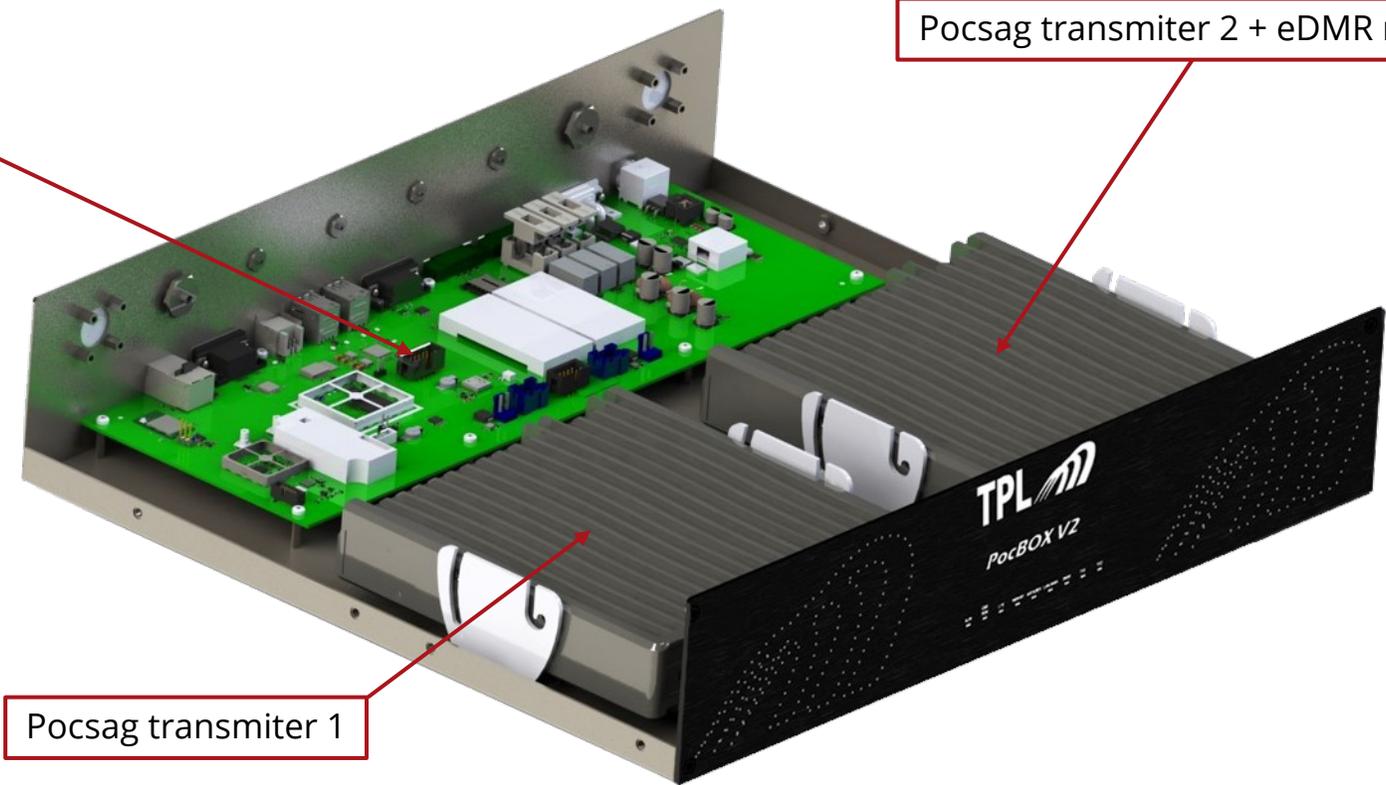

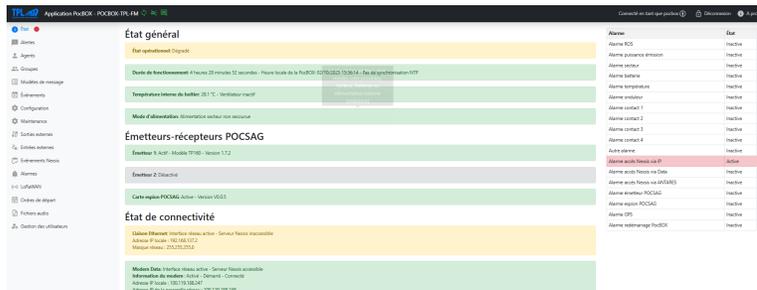

PocBOX V2 – New paging system

PocBOX V2 – New paging system

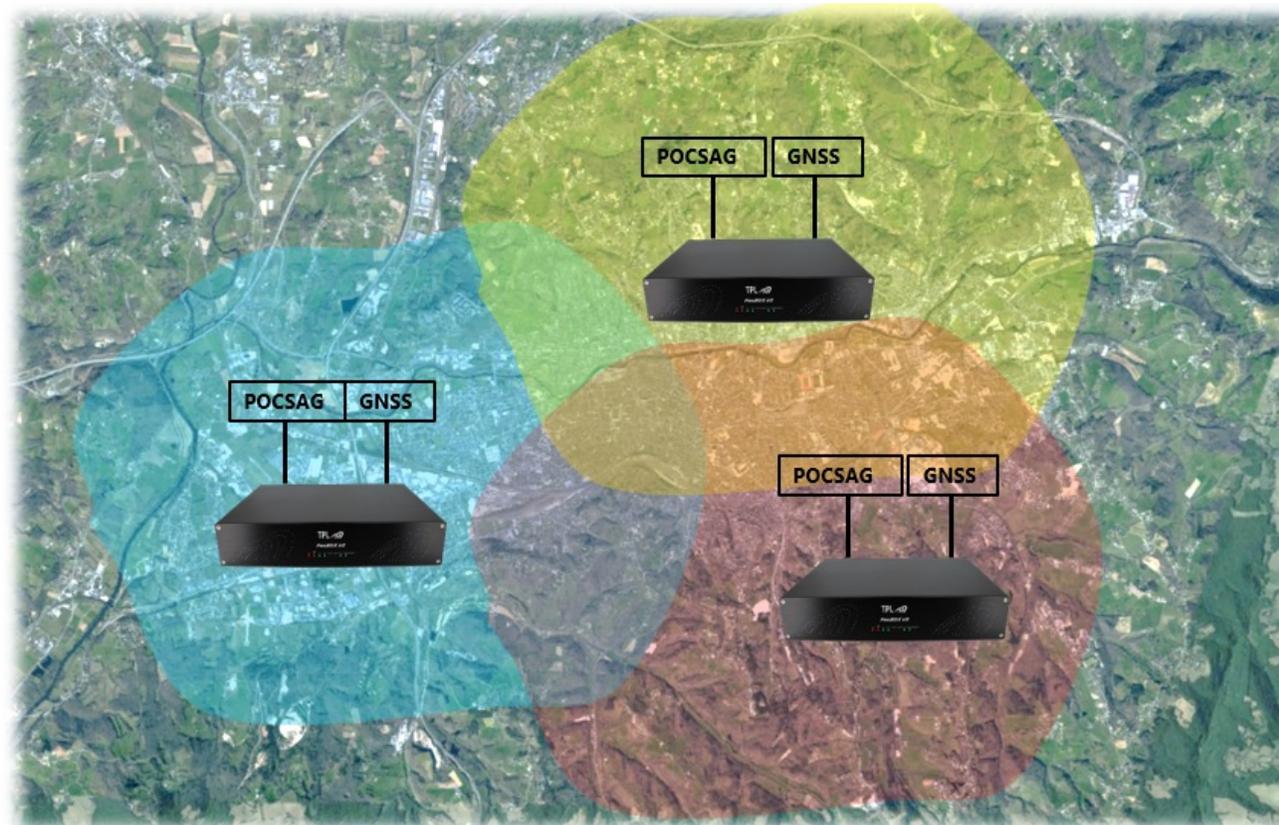

Main electronic board

Pocsag transmitter 2 + eDMR radio

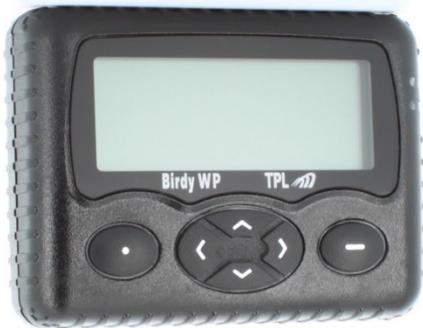

Pocsag transmitter 1

PocBOX V2 – ZAS (Synchronized Paging Zone)

Pagers — what's next?

Birdy WPs – Standard Pager

Since 2010, mainly focused on the firefighter market.

Birdy 2G/3G/4G

Since 2013, mainly focused on the firefighter market.

Birdy Slim IoT

Since 2016, Present on all markets, with a main focus on in-house paging.

Birdy Button

Since 2024, Present on all markets, with a main focus on in-house paging. First pager made in France

Pagers — what's next?

- **A new generation pager — fully designed and manufactured in France.** Developed with 100% French know-how: electronics, plastics, and assembly. Equipped with the latest technologies: 4G CAT1bis / 5G RedCap connectivity, extended battery life, and a modern, high-definition display.
- **Launch planned for end of 2026.**
- Replacing Birdy WP and Birdy 4G
- Birdy Slim IoT remains in the lineup

Merci / Thank you for your attention
